# Gradient Descent

**Convex Optimization** 

## How to minimize cost function?

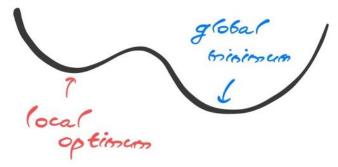

#### **Gradient Descent**

Want to find W, b that minimize J(W, b)

#### **Gradient Descent**

- Simple and gives some kind of meaningful result for both convex and nonconvex optimization
- -> It tries to improve the function value by moving in a direction related to the gradient (i.e first derivative)
- 1. For convex optimization, it gives the global optimum
- 2. For nonconvex optimization, it arrives at a local optimum

#### **Convex function**

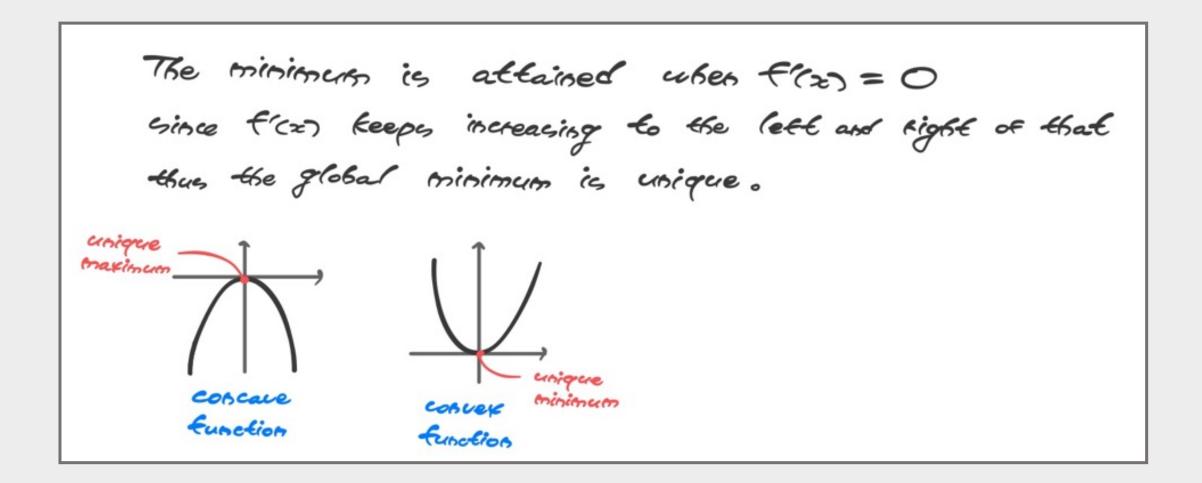

Function f is convex

if "f(1x+ (1-1)y) & 1+(x) + (1-1)+(y)"

for Yx,y and 1 ∈ [0,1]

**Taylor expansion** of a function all of whose derivatives exist at x

The function is convex if 
$$f''(x) \ge 0$$
 for the  $f''(x) \ge 0$  is increasing function of  $x$ )

#### **Gradient Descent**

- Given a differentiable function of f(x) and an initial parameter of x1
- Iteratively moving the parameter to the lower value of f(x)
- By taking the direction of the negative gradient of f(x)

#### Why this works?

$$f(x) = f(a) + \frac{f'(a)}{(l)} (x-a) + O((|x-a|^2))$$
Assume  $a = xl$  and  $x = xl + hall vector for the partial derive  $f(xl + hall) = f(xl) + hf'(xl) (ll + h^2 O(l))$ 

$$f(xl + hall) = f(xl) = hf'(xl) (ll)$$$ 

$$U_{i}^{*} = argmin_{ii} \{ \{x_{i} + \beta_{ij}\} - \{x_{i}\} \}$$

$$= argmin_{ii} \{ \{x_{i} + \beta_{ij}\} \} = -\frac{f(x_{i})}{f(x_{i})}$$

$$(: f(x_{i} + \beta_{ij}) \} \{ \{x_{i}\} \}, \quad ae \cdot b = \{ae | b | eos \alpha \}$$

$$"x_{eq} \leftarrow x_{e} + \beta_{i} = x_{e} - \beta_{i} \frac{f(x_{i})}{f(x_{i})}$$

$$"x_{eq} \leftarrow x_{e} + \beta_{i} = x_{e} - \beta_{i} \frac{f(x_{i})}{f(x_{i})}$$

#### **Example**

$$f(x_{1},x_{2}) = (1-x_{1})^{2} + (00(x_{2}-x_{1}^{2})^{2}$$

$$\frac{\partial}{\partial x_{1}}f(x_{1},x_{2}) = -2(1-x_{1}) - 400x_{1}(x_{2}-x_{1}^{2})$$

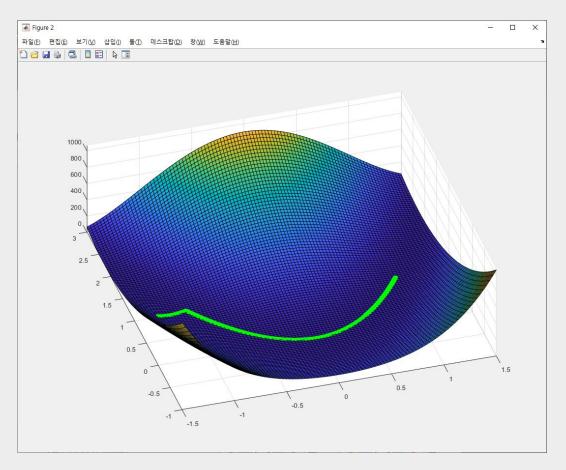

$$\frac{\partial}{\partial x_{2}}f(x_{1},x_{2}) = 200(x_{2}-x_{1}^{2}) \quad \text{global minimum} = 0$$

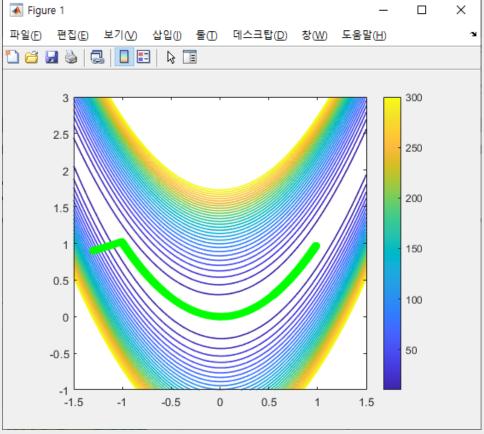

$$\text{at } (1.1)$$
initial point  $k^{0} = (x_{1}^{0}, x_{2}^{0}) = (-1.3, 0.9)$ 

$$f(k^{0}) = \left(\frac{\partial}{\partial x_{1}}f(x_{1},x_{2}), \frac{\partial}{\partial x_{2}}f(x_{1},x_{2})\right)$$

$$= (-kr_{2},k_{1}, -168)$$

$$k^{0} \leftarrow k^{0} - h \frac{f'(k^{0})}{f'(k^{0})}$$
tepeat the update until converge

## 1. Gradient descent for convex functions: univariate case

#### Newton's method

## 2. Convex multivariate functions

( i.e y + p2 + y 20 for ty)

It higher derivatives also exist. the multivariate

Taylor expansion for an 
$$n$$
-variate function  $f$  is

" $f(x+y) = f(x) + \nabla f(x) \cdot y + y^T \nabla^2 f(x) y + \cdots$ "

Hereian

$$H(f) = \begin{bmatrix} \frac{\partial^2 f}{\partial x_i^2} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} \\ \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} \\ \vdots & \vdots & \vdots & \vdots & \vdots \\ \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} \\ \vdots & \vdots & \vdots & \vdots & \vdots \\ \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} \\ \vdots & \vdots & \vdots & \vdots \\ \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} \\ \vdots & \vdots & \vdots & \vdots \\ \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} \\ \vdots & \vdots & \vdots & \vdots \\ \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} \\ \vdots & \vdots & \vdots & \vdots \\ \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} \\ \vdots & \vdots & \vdots & \vdots \\ \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} \\ \vdots & \vdots & \vdots & \vdots \\ \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} \\ \vdots & \vdots & \vdots & \vdots \\ \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} \\ \vdots & \vdots & \vdots & \vdots \\ \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} \\ \vdots & \vdots & \vdots & \vdots \\ \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} \\ \vdots & \vdots & \vdots & \vdots \\ \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} \\ \vdots & \vdots & \vdots \\ \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} \\ \vdots & \vdots & \vdots \\ \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} \\ \vdots & \vdots & \vdots \\ \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} \\ \vdots & \vdots & \vdots \\ \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} \\ \vdots & \vdots & \vdots \\ \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} & \frac{\partial^2 f}{\partial x_i \partial x_i} \\ \vdots &$$

# 3. Gradient Descent for Constrained Optimization

"Constrained optimization consists of colving the tollowing where K is a convex set and f is convex tunction.

"mint(z) s.t zek"

#### Lagrange Multiplier

here optimization ( min f(x) 4.t 
$$g(x) = c$$

problem

$$\exists de(R 4.t min f(x) + d(g(x) - c)$$
